

Magnetic drive pumps

Chemically resistant magnetic drive pumps
which can tolerate abnormal operation

The MX-F series development was based on the concept of optimum reliability under severe operating conditions and features our unique self radiation structure (Patented) as well as our well-established non contact system.

Chemically resistant magnetic drive pumps which can tolerate abnormal operation

The MX-F series development was based on the concept of optimum reliability under severe operating conditions and features our unique self radiation structure as well as our well-established non contact system.

The MX-F retains excellent durability under abnormal operation such as dry running, cavitation and closed-discharge operation.

High grade materials including ETFE, are utilized as the main wetted materials.

The MX-F series is an excellent choice for reliably handling a wide range of chemicals in various manufacturing processes.

- An improved mechanical strength design allows operation under abnormal conditions and results in reduction of running cost and maintenance cost.
- The adoption of a volute casing divided into two raises efficiency.
- Simply constructed, it is robust and facilitates maintenance.
- Fluororesin, excellent resistance to chemicals.

Self-radiating structure

(International patent applied)
Through heat-dispersion holes provided in the fixed portions of the impeller and the magnet capsule, the liquid around the spindle and the bearing is forced to circulate so that heat generated by sliding can be reduced effectively. Thus, thermal deformation and melt are prevented.
(Except MX-F100)

Non-contact structure

By installing the driving magnet and the driven magnet in an inventive way, the movement of the magnet capsule is controlled by magnetic force to prevent the rear thrust and the rear portion of the bearing coming into contact with each other continuously even during dry running. This structure reduces heat generation and secures lubricant routes.
(Except MX-F100)

Illustration shows MX-F250

Volute casing divided into two sections

(International patent applied)
The MX-F series is the first resin magnet pump which uses the pump casing divided into the front casing and the rear casing to form a vortex chamber as an ideal form. Therefore, the internal leak phenomenon, which means that the liquid getting out of the impeller returns to the pump casing and is suppressed to a minimum and the liquid is efficiently guided to the discharge port to enhance overall efficiency.
(Except MX-F400)

Front casing Rear casing

Robust structure

All stress bearing portions, such as the front and rear casings, are reinforced by means of ribs to improve the pressure resistance and the mechanical strength of the pump.

The bearing is not only fixed by conventional press fit but is also sandwiched between the abutting portion in the depth of the magnet capsule and the rear end of the impeller to improve its reliability under high temperature.

(Except MX-F100)

MX-F402 and F403 models: an unplugging preventive lock pin is adopted for ensuring more steady securing.

Front casing of type MX-F100 and MX-F402/403

Precautions for pump selection

1. The performance curves on this catalogue are based on clean water of 20 °C.

2. For the MX-F250 or larger models, select a proper impeller size according to specific gravity. Always keep 5 - 10% allowance to motor output.

Applicable motor output

$$Sp \times S.G \times (1.05 - 1.1) \leq \text{Motor output Allowance}$$

3. The magnetic drive pump is not durable for a long time in closed-discharge operation. Always keep the minimum flow.

Minimum flow

MX-F100, 250, 251, 400, 401: 10 L/min
MX-F402, 403: 20 L/min

4. NPSH validation

Observe the following for the prevention of cavitation.

$$NPSHa \geq NPSHr + 0.5 \text{ m Allowance}$$

$$NPSHa = 10^6 \times \frac{(Pa - Pv)}{\rho g} \pm hs - hfs$$

5. Maximum withstand pressure

MX-F100: 0.19MPa MX-F400: 0.22MPa
MX-F250: 0.25MPa MX-F401: 0.28MPa
MX-F251: 0.33MPa MX-F402: 0.43MPa
MX-F403: 0.43MPa

NPSHa: Net Positive Suction Head Available (m)
NPSHr: Net Positive Suction Head Required (m)
Pa: Pressure on the suction liquid level (MPa) (Absolute pressure)
Pv: Pressure of saturated vapor (MPa)
hs: Static suction head (m)
hfs: Suction pipe resistance (m)
 ρ : Liquid density (kg/m³)
g: G-force (9.8m/sec²)

Note 1) The dimensions L may differ with the type of motor installed.

Optional accessories

Iwaki dry running protector DR series

Model DR is electric current sensing type dry running protector. It detects the decreased load current (lower limit) to stop the pump when it runs dry or runs with air sucking in. It can detect over-load, too.

DR-20

- Current figure to be set is indicated on LCD.
- Both top/bottom figures can be set.
Top: Over-load
Bottom: Dry running, air sucking-in operation, operation with suction side closed
- Built-in current transformer
- DIN rail mounting
- It is unable to use DR when inverter is employed in the system.

Specification

50/60Hz

Model	DR-20
Motor power	380 to 440V three phase
Applied motor	0.75 to 15kW
Power control	100 to 240V single phase
Power	200 to 240V ±10% single phase
Input	3.5W
Detective current	0.5 to 32.0A
Current transformer(CT)	Built-in
Outer dimension	D80 X W153 X H122

Iwaki process magnetic drive pump series

MX series

Withstands difficult operating conditions and offers high efficiency

Max. discharge capacity: 520 L/min
Max. discharge head: 35 m
Main materials: GFRPP

SMX series

Versatile self-priming magnetic drive pump with enhanced durability under abnormal operation

Max. discharge capacity: 280 L/min
Max. head: 17 m
Main materials: GFRPP, CFRETFE

MXM series

Magnetic drive pumps with an excellent balance of features and performance

Max. discharge capacity: 600 L/min
Max. head: 29 m
Main materials: CFRETFE

MDM series

Magnetic drive processing pump with dry running capability

Max. discharge capacity: 1.4 m³/min
Max. head: 74 m
Main materials: CRETFE, PFA
